

# Safety Valves (CPD Certified)

This 1-day course is designed as a comprehensive introduction to safety valves. This course explains why there is a need for safety valves and the associated regulatory requirements. How safety valves function and how to size and select the correct valve for given duties and specifications. The course employs lectures, demonstrations and problem solving sessions.

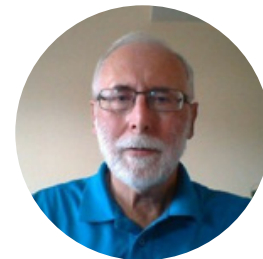

## Course Objectives

- Learn the main types and operating characteristics of safety valves
- Be able to select and specify the correct safety valve for a given application
- Be aware of legislation covering pressure equipment and safety valves - Receive a full course manual as a permanent record

## Who Should Attend

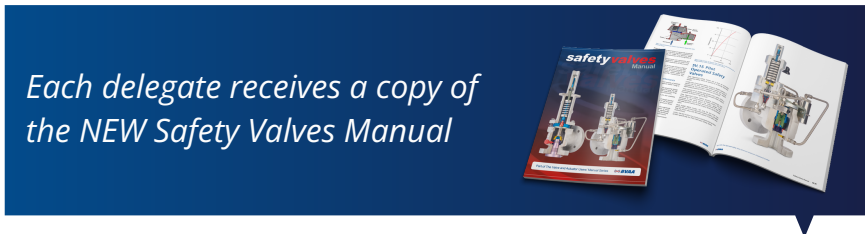

This training course is designed for engineers who use/select and for Technicians who install/service these safety devices. Managers with responsibility for plant and equipment would find an appreciation of the subject and the issues involved useful.
