

Valves - Advanced Level (CPD Certified)

This course builds on existing basic technical knowledge of valves, and providing time for discussion and clarification of specific valve issues. It will focus on basic standards, pressure envelope design, materials and corrosion, testing, installation and repair.

Course Objectives

- Introduce basic design principles and important standards.
- Broaden knowledge of valve pressure envelope design, seal technology and operation.
- Gain an understanding of corrosion mechanisms and the selection of valve materials.
- Highlight end user best practice in inspection and testing, installation and service and repair of industrial valves.

Who Should Attend

This course is aimed at individuals who already have a basic technical knowledge of valves and would like to broaden their knowledge with a greater understanding of valve technology, from specification and design, through to operation and servicing.

"Clear presentation, great knowledge. Questions allowed throughout - very helpful."
